

## TERi™ Geriatric Patient Skills Trainer - Androgynous trainer for physical skills practice simulation, light skin

### Product Information

Weight	33.5 kg
Brand	Life/form
Item No.	1022932

### Description

A comprehensive male/female elderly patient care trainer for medical simulation. It enables realistic, comprehensive geriatric training, from skin care and prehospital emergencies to crucial daily living assistance. Featuring weighted, fully articulated joints, TERi™ mimics a fragile patient, enabling training on patient positioning and fall prevention. Weight is distributed to represent a real patient for lifting and carrying.

TERi™ also features soft silicone skin that look and feels natural. This allows for a more realistic training experience, and enables care providers to better understand the causes and the treatments needed to manage skin tears. Caregivers can correctly learn the essentials of bathing, hair care, denture care, hearing aid placement, eye care and ostomy/catheter care.

The Geriatric Patient Skills Trainer offers extensive physical skills practice simulation with injection/IV, catheterization, cardiovascular and respiratory support.

Features:

- Superior Range of Motion
- Enhanced Full Body Aesthetics
- Articulating Jaw
- Interchangeable Pupils: normal, constricted, dilated
- Male & Female Options (wig included)
- Soft Male (circumcised and uncircumcised features) and Female Genitalia
