

# **Technical Data Sheet**

Model: *TS2-22* 

### **MATERIAL**

Material: High quality of pre-galvanized steel, zinc ASTM-G-90 under control of ASTM-A653. Yield strength is

33,000psi and E is  $29(10^3)$  ksi.

Manufacturing method: Cold roll forming using a series of rolls according to AISI-S100-16 and CSA-S136-16.

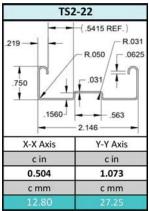

Office: 450-975-0909

Thickness: 22 Gauge (0.031 in / 0.794 mm)

## GENERAL NOTES

- The beam capacies shown above include the welght of the strut beam. The beam weight must be subtracted from these capacities to arrive at the net beam capacity.
- 2. Allowable beam loads are based on a uniformly loaded, simply supported beam.
- **3.** Beam capacity, the allowable stress is based on 18, 000 psi. Means a safety factor of 1,83.
- 4. The load charts shows beam capacity for strut without holes. For strut with hole, multiply by 0.9.

capacity and is therefore the governing constraint

### **GENERAL NOTES**

- The beam capacies shown above include the weight of the strut beam. The beam weight must be subtracted from these capacities to arrive at the net beam capacity.
- Allowable beam loads are based on a uniformly loaded, simply supported beam.
- Beam capacity, the allowable stress is based on 18, 000 psi. Means a safety factor of 1,83.
- Column capacity, the allowable stress is based on 15, 000 psi. That's mean a safety factor of 2,20.
- 5. The load charts shows beam capacity for strut without holes. For strut with hole, multiply by 0.9.
